

CERATOPHYLLUS (MONOPSYLLUS) CARNIOLICUS
BRELIH & TRILAR, 2001 NEW FLEA SPECIES
FROM GLIS GLIS NESTS

TRILAR, T. and BRELIH, S.

Slovenian Museum of Natural History, Ljubljana, Slovenia

A new species of flea was recently described associated with *Glis glis*. All specimens of the new species were collected from the nests of *Glis glis* built in the wooden nest boxes in the Sviščaki area (Mt. Snežnik, Slovenia) 1250 m above sea level. They are very rare, representing less than 0.1% of the *Monopsyllus* specimens we examined. The ecology and the major host of *Ceratophyllus (Monopsyllus) carniolicus* BRELIH et TRILAR, 2001 are unknown at this time.
